Adaptive Neurodynamics Engineering Platform

Explore learning and memory in brain-inspired research models and compare their observed behaviour.

Product overview

ANEP is an experimental spiking-neural-dynamics research asset with sparse topology and short-horizon memory studies. Agree the included development-branch source and historical evidence package explicitly.

Potential acquirers

- Computational neuroscience groups
- AI research teams
- Scientific software vendors

Documented functions

- Run neural-dynamics experiments
- Compare declared study settings
- Retain reproducible benchmark records
- Review experimental outcomes
- Prepare research evidence

Available output types

Experiment records / Benchmark reports / Research documentation

AI & decision software

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 45,000	**Prototype**

Current scope and conditions

A prototype offered for evaluation and continued development; production acceptance is separate.

Available for acquisition discussion

Identified edition: 18.3

• Computational neural-dynamics research. Biological equivalence and experimental outcomes require separate evidence.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-037 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

https://thearchitect-max.github.io/MyProjects/projects/adaptive-neurodynamics-engineering-platform/

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-21. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	45,000	50,369
Negotiation reference - low	35,000	39,176
Negotiation reference - high	55,000	61,562
Recreation cost estimate	400,000	447,720
Marketability cost scenario	336,600	376,756
Monetisation cost scenario	229,500	256,879
Risk-adjusted strategic reference	166,898	186,809
Weighted economic reference	271,634	304,040

Milestone-conditioned reference

EUR 323,096; model change EUR 51,462. Reach the next portfolio maturity stage with source-pinned, reproducible release checks, bounded claims and agreed handover evidence.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance.

Retained seller estimate; work breakdown required. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
