Fundamental Dark Sector Research Platform

Evidence-governed numerical cosmology and dark-sector research with authentic published BAO benchmark inputs and bounded numerical comparisons.

Product overview

Numerical FLRW/CPL and BAO likelihood research, authenticated DESI reference products, published-chain reanalysis and a source-parameterized Cobaya/CAMB model comparison.

Potential acquirers

- Cosmology research groups
- Numerical inference teams
- Scientific software developers

Documented functions

- Reference cosmology and authentic BAO likelihood implementation
- Original-source authentication and published-chain reanalysis
- Restricted expression interpreter, Cobaya/CAMB bridge and regression gates

Available output types

BAO likelihood reports / Source provenance records / Model comparison evidence

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 12,500 · indicative USD 14,018

Identified edition: R3B2D3C / original Cobaya Model

Research software · Scope closure required

Current scope and conditions

Specifically agreed first-party R3B2D3C / original Cobaya Model source, documentation and retained evidence: Numerical FLRW/CPL and BAO likelihood research, authenticated DESI reference products, published-chain reanalysis and a source-parameterized Cobaya/CAMB model comparison. Independent four-chain sampling is an open candidate. R3 remains open and R4 blocked; no complete independently sampled posterior, new physics or scientific peer-review acceptance.

- Independent four-chain sampling is an open candidate. R3 remains open and R4 blocked; no complete independently sampled posterior, new physics or scientific peer-review acceptance.
- First-party rights, exact delivery and recipient acceptance require project-specific agreement.

Conditions before handover

- Freeze the R3B2D3C / original Cobaya Model first-party delivery and reconcile source-specific acceptance records.
- Agree the exact first-party source edition, deliverable manifest and recipient acceptance criteria.
- Reconcile third-party components, source terms and transferable first-party rights.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	12,500	14,018
Negotiation reference - low	10,000	11,214
Negotiation reference - high	15,625	17,522
Recreation cost estimate	43,000	48,220
Marketability cost scenario	21,382	23,978
Monetisation cost scenario	16,448	18,445
Risk-adjusted strategic reference	7,612	8,536
Weighted economic reference	20,980	23,527

Cost basis

Initial bounded work-package estimate. 400 assumed hours at EUR 94/hour, 15% coordination allowance; EUR 43,000 adopted recreation increment and EUR 12,500 asking-reference increment. No premium for version labels, test counts, scientific claims, future work or unrelated assets.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Milestone-conditioned reference

EUR 30,777; model change EUR 9,797.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Current main merge supersedes stale README candidate notices: 420/420 private CPU tests and 3/3 genuine original-parameterized model log-likelihood comparisons; maximum delta about 1.32e-13.

Remaining limits

Independent four-chain sampling is an open candidate. R3 remains open and R4 blocked; no complete independently sampled posterior, new physics or scientific peer-review acceptance.

Development position

R3B2D3D0: first source-verified four-chain Cobaya/CAMB MCMC pilot

Acquisition evidence profile

Technical scope: R — Numerical FLRW/CPL and BAO likelihood research, authenticated DESI reference products, published-chain reanalysis and a source-parameterized Cobaya/CAMB model comparison. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified.

Rights and component obligations: R0 — No repository licence evidence identified.

Commercial basis: C2 — Seller ask and reproducible economic reference established.

Delivery and handover: T1 — Implementation exists but core transfer evidence is incomplete.

Buyer information and next step

Quote TA-IP-123 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
