The Stone Universe Research Framework

A theoretical-physics research framework with classical lattice and scalar-field demonstrators, native source evolution and explicit symmetry, refinement and anisotropy counterexamples.

Product overview

A theoretical-physics research framework with classical lattice and scalar-field demonstrators, native source evolution and explicit symmetry, refinement and anisotropy counterexamples.

Potential acquirers

- Computational-physics research software vendors
- Theoretical and analogue-model research groups
- Numerical-methods and scientific-software teams

Documented functions

- Run bounded lattice and scalar matter-field analogues
- Compare proper cubic rotations with continuous-isotropy claims
- Inspect native-source refinement and mesh-phase effects
- Stress directional effects across time and initial preparations
- Separate diagnostic probe contributions under explicit assumptions

Available output types

Classical analogue and scalar-model research records / Conservation, force and finite-domain diagnostics / Model-consistency and counterexample evidence

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 27,500	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: R2l / native lattice anisotropy and mechanism diagnostics

• Current local replay passes its executed tests through R2l. Retained source-specific CPU acceptance records cover the separate research stages; R2m remains outside this offered source edition.

• Proper cubic covariance, source averaging and finite numerical agreement do not establish continuous rotational symmetry, universal free fall, Einstein dynamics or physical spacetime grains.

• The source asserts proprietary status, but dedicated licence/transfer terms and complete component/handover review remain open. No empirical gravitational discovery is established.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-117 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-03. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	27,500	30,844
Negotiation reference - low	22,500	25,236
Negotiation reference - high	34,500	38,695
Recreation cost estimate	92,000	103,187
Marketability cost scenario	35,581	39,908
Monetisation cost scenario	23,460	26,313
Risk-adjusted strategic reference	7,270	8,154
Weighted economic reference	37,353	41,895

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained priced scope and explicitly non-overlapping implementation budgets reconcile below. Effort and prices remain seller assumptions, not actual expenditure, independent quotations or established market value. Previously budgeted classical lattice and R2g diagnostic work is retained once. Only implemented R2h-R2l symmetry, native-source, dynamic anisotropy and mechanism-probe software with its regression/documentation is added. R2m, physical gravity, hardware, observed data and future research are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
