Narrative Collectibles Platform

Register object-independent collectibles, keep fictional narratives separate from physical facts, and review editions, evidence and local integrity records.

Product overview

An object-independent local SQLite registry and studio with edition limits, narrative checks, fictional world graph, deterministic replay, keyed checkpoints, evidence custody and verified backup/restore.

Documented functions

- Maintain object, collection and edition identities
- Review fictional narrative continuity separately from facts
- Replay fictional world and timeline changes
- Verify keyed checkpoints and evidence custody
- Create and verify local backup/recovery packages

Potential buyer fit

Collectible registry software teams / Narrative product studios / Independent collection operators

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Edition and object records / Fictional world/event histories / Issuer records and integrity receipts / Verified local recovery packages

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 9,000	**EUR 30,000**

Current repository documentation

Current main baseline: 0.4.0.

An object-independent local SQLite registry and studio with edition limits, narrative checks, fictional world graph, deterministic replay, keyed checkpoints, evidence custody and verified backup/restore. All 40 Git blobs verified; all 84 local Python tests passed on the exact R3/v0.4.0 snapshot, including concurrency, tamper rejection and recovery cases. No public commerce, payments, shipping, production accounts or hosted deployment is delivered. HMAC is keyed local integrity, not independently witnessed ownership or certified provenance. Lithonarra is a separate consumer application/brand; physical stock and fictional content rights are not automatically transferred with the software.

Next qualification step: Complete domain and operator acceptance, key/anchor custody and the final security, legal and operational production gates.

Documentation checked: 17 October 2026. All 40 Git blobs verified; all 84 local Python tests passed on the exact R3/v0.4.0 snapshot, including concurrency, tamper rejection and recovery cases.

Individual financial-reference review

Financial-reference review: 17 October 2026. New present-source low-effort recreation reference EUR 30,000; seller asking choice EUR 9,000. Market value remains NOT_ESTABLISHED. Estimated hours are not logged time or expenditure. Original financial-reference date: 2026-10-17.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-109-P: current documentation. TA-IP-109-C: financial-reference review, 17 October 2026. TA-IP-109-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Local checks are disclosed per project; see the exact source receipt and retained qualification scope.
