StabilityMesh

Compare resilience scenarios for your distributed systems and study how defensive responses affect the simulation.

Product overview

A simulation environment for examining service disruption and controlled defensive responses.

Documented functions

- Model coupled service failures
- Observe pressure and system health
- Compare defensive resource choices
- Study degraded operating conditions
- Review historical scenario results

Potential buyer fit

Platform engineering teams / Reliability teams / Infrastructure software vendors

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Resilience dashboards / Scenario histories / Response comparisons

Profile and full editable brief

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 205,000	**EUR 871,500**

Current repository documentation

Current main baseline: 1.9.1.

Adds hash-bound evidence custody, guarded local infrastructure qualification, Alibaba/Azure measured-trace adapters, full-trace sensitivity and operational outcome/readiness contracts. All 92 Git blobs verified. Eleven repository-native static gates passed, including parsing 61 Python files. Full dependency-based tests and external-data campaigns were not rerun. Measured external workloads remain separate from simulated controller responses. Operational calibration on genuinely labeled outcomes, environment-specific acceptance and production deployment remain open. v1.9.1 is a metadata/transfer patch over the v1.9 functional baseline.

Next qualification step: Freeze and accept an exact delivery; run the full dependency-based suite and qualify measured, labeled outcomes in the intended environment.

Documentation checked: 17 October 2026. All 92 Git blobs verified. Eleven repository-native static gates passed, including parsing 61 Python files. Full dependency-based tests and external-data campaigns were not rerun.

Individual financial-reference review

Financial-reference review: 17 October 2026. Retained EUR 850,000 base plus EUR 21,500 low-effort implementation increment = EUR 871,500. Seller asking reference EUR 200,000 to EUR 205,000, retaining the earlier asking/cost proportion. Market value remains NOT_ESTABLISHED. Estimated hours are not logged time or expenditure. Original financial-reference date: 2026-10-12.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-003-P: current documentation. TA-IP-003-C: financial-reference review, 17 October 2026. TA-IP-003-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Local checks are disclosed per project; see the exact source receipt and retained qualification scope.
