# Universal Sensor Fusion & Digital Twin Intelligence Platform

Bring operational observations into a digital-twin view and review changes with their uncertainties.

## Product overview

A domain-neutral twin software foundation for operational observation and supervised review.

## Documented functions

- Organise operational observations
- Review estimated state and uncertainty
- Supervise bounded workflows
- Recover retained sessions
- Replay evaluation histories

## Potential buyer fit

Digital-twin vendors / Industrial software teams / Systems integrators

Buyer profiles are positioning suggestions; they are not established customers or contracts.

## Documented output types

Twin state records / Operational reports / Replay evidence

## Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/universal-sensor-fusion-digital-twin-intelligence-platform/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

# Status and commercial reference

| SELLER ASKING REFERENCE | RECREATION ESTIMATE |
| --- | --- |
| **EUR 240,000** | **EUR 797,000** |

## Current repository documentation

Current main baseline: 1.8.0.

Separate development: 1.8.1 - unmerged hardening candidate; excluded from current price.

Adds coordinated single-writer runtime, fencing/idempotency controls, transparent scenario decisions and deterministic multi-source telemetry alignment with replayable provenance. All 60 Git blobs verified; 73 local Python tests passed on the exact v1.8.0 snapshot. This is software testing, not physical-system or production certification. The separate v1.8.1 hardening PR is unmerged and excluded from the v1.8.0 cost scope. Domain calibration, physical sensor accuracy and production acceptance remain open.

Next qualification step: Review the separate v1.8.1 hardening candidate, then qualify representative domain telemetry and recipient deployment conditions.

Documentation checked: 17 October 2026. All 60 Git blobs verified; 73 local Python tests passed on the exact v1.8.0 snapshot. This is software testing, not physical-system or production certification.

## Individual financial-reference review

Financial-reference review: 17 October 2026. Retained EUR 780,000 base plus EUR 17,000 low-effort implementation increment = EUR 797,000. Seller asking reference EUR 235,000 to EUR 240,000, retaining the earlier asking/cost proportion. Market value remains NOT_ESTABLISHED. Estimated hours are not logged time or expenditure. Original financial-reference date: 2026-10-12.

## Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

## Source basis

TA-IP-025-P: current documentation. TA-IP-025-C: financial-reference review, 17 October 2026. TA-IP-025-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Local checks are disclosed per project; see the exact source receipt and retained qualification scope.
