Closed-Cycle Energy Research & Verification Platform

Compare declared fluid-mechanical models, track energy boundaries and qualify numerical convergence before drawing any conclusions about a physical device.

Product overview

Independent computational research software for hydrostatic loading, explicit energy ledgers, passive laminar reservoir networks and bounded numerical-convergence assurance.

Potential acquirers

- Engineering and scientific-simulation software vendors
- Energy-conversion and fluid-systems research groups
- Numerical verification and engineering-methodology teams

Documented functions

- Calculate declared hydrostatic and conservative work
- Reconcile explicit energy sources and stores
- Compare reservoir, channel and passive network models
- Audit refinement errors against analytical references
- Reject unsupported numerical and physical claims

Available output types

Fluid-mechanical and energy-accounting records / Analytical regression and error-budget reports / Numerical-convergence and scope assessments

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 13,000	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: 0.2.0a0 / R2B2C numerical convergence

• The offered work is numerical research software. It does not demonstrate perpetual motion, energy without a source, a working physical engine or historical-device reconstruction.

• Retained cross-environment evidence covers earlier identified software scopes. Current convergence checks pass locally; independent acceptance of that increment remains pending.

• Models have explicit passive, laminar and analytical limits. Detailed physical simulation, calibrated hardware measurements, novelty, safety and freedom-to-operate require separate review.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-116 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-31. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	13,000	14,524
Negotiation reference - low	10,500	11,731
Negotiation reference - high	16,000	17,875
Recreation cost estimate	43,000	48,040
Marketability cost scenario	16,630	18,579
Monetisation cost scenario	10,965	12,250
Risk-adjusted strategic reference	3,398	3,796
Weighted economic reference	17,458	19,504

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The recreation estimate adopts the lowest expressly scoped seller effort scenario. It is not recorded expenditure, an absolute minimum, an independent quote or established market value. Only the agreed first-party fluid models, energy accounting and numerical-assurance work are priced. Other assets, devices, physical energy output, experimental findings, historical designs, patent rights and future research are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
