Bio-Inspired Neural Dynamics & Active Inference Simulation Platform

Compose bounded synthetic neural experiments, compare declared hypotheses and inspect how observation choices affect distinguishability within qualified research protocols.

Product overview

Computational-neuroscience research software for bounded composable synthetic models, controlled cohort studies, predeclared hypothesis comparisons and observation-equivalence audits.

Potential acquirers

- Computational-neuroscience research teams
- Research-software and simulation vendors
- Neural-systems methodology and evaluation groups

Documented functions

- Compose supported bounded synthetic model configurations
- Run controlled studies, cohorts and solver cross-checks
- Register source-bound models and predeclare hypothesis comparisons
- Review sensitivity, calibration/evaluation roles and leakage controls
- Audit observation masks, resolution and scenario-local alias witnesses

Available output types

Synthetic model and cohort reports / Solver and registry qualification records / Hypothesis comparison and sensitivity reports / Observation-resolution and alias-witness audits

Scientific observation & life sciences

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 947,500	**Developed software**

Current scope and conditions

Developed research or product software within the identified edition and material boundaries. Intended-use and recipient acceptance remain separate.

Available for acquisition discussion

Identified edition: 2.9.8 / qualified CPU scope

• Qualified CPU evidence applies only to its identified source and tested environments. Another local environment still has an unresolved exact numerical replay discrepancy affecting downstream qualification.

• Bounded synthetic comparisons do not establish a unique biological mechanism, empirical identifiability, causal validity, clinical relevance, AGI or production readiness.

• Observation aliases and separation witnesses are protocol-specific software results; recipient-environment replay and scientific/data-rights qualification remain separate.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-077 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-28. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	947,500	1,054,852
Negotiation reference - low	757,500	843,325
Negotiation reference - high	1,187,500	1,322,044
Recreation cost estimate	3,379,000	3,761,841
Marketability cost scenario	3,302,972	3,677,199
Monetisation cost scenario	3,877,403	4,316,713
Risk-adjusted strategic reference	3,332,488	3,710,059
Weighted economic reference	3,447,196	3,837,763

Milestone-conditioned reference

Not established. No independently supported higher maturity amount or new attributable market/income evidence is established.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions, not actual expenditure, independent quotations or market value. The previously priced neural runtime, source adapters, interaction/lineage studies, experiment contracts and portability diagnostics are reused once. Added bounded composition and synthetic hypothesis/observation audit software is included. Biological or clinical findings, universal numerical portability, empirical performance, third-party data ownership, future development phases and production qualification are excluded.

Partial scoped budget; retained anchor remains provisional. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
