Aletheia Intelligence Fabric

Collect authorised information, review attributable entity relationships and recover bounded local workflows while evaluating controlled multi-worker reference designs.

Product overview

An authorised evidence and entity-intelligence prototype with recoverable local work state, relationship review and controlled worker-ownership reference workflows.

Potential acquirers

- Evidence and investigation-software vendors
- Enterprise intelligence and compliance teams
- Authorised research and information-analysis providers

Documented functions

- Collect and normalise authorised source information
- Resolve supported entities and inspect bounded relationship graphs
- Review attributable evidence and change records
- Recover bounded local work state after interruption
- Evaluate controlled ownership, retry and stale-worker scenarios

Available output types

Entity and relationship views / Attributable evidence packages / Recovery and continuity records / Reference deployment and acceptance assessments

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 206,000 · indicative USD 231,008

Identified edition: 1.4.0

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for 1.4.0. The previously priced acquisition, graph, entity, evidence and defensive-control foundations are reused once. Third-party source entitlements, real shared persistence/queue deployment, production multi-node acceptance and legal/operational certification are excluded.

• The offered edition is a developed prototype for authorised information workflows; source permissions and intended-use acceptance remain separate.

• Local durability is a bounded single-writer implementation. Distributed operation requires separately supplied durable persistence and queue services with independent qualification.

• Reference concurrency and recovery checks do not establish production multi-node durability, legal compliance or unrestricted access to third-party sources.

Conditions before handover

• Confirm the dependency-free reference scope and any third-party materials added for the agreed delivery.

• Qualify external durable backends and multi-process operation before relying on distributed deployment.

• Agree the exact delivery manifest, transferable rights and recipient acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	206,000	231,008
Negotiation reference - low	164,500	184,470
Negotiation reference - high	257,000	288,200
Recreation cost estimate	977,500	1,096,169
Marketability cost scenario	1,308,628	1,467,495
Monetisation cost scenario	1,686,187	1,890,890
Risk-adjusted strategic reference	1,751,926	1,964,610
Weighted economic reference	1,456,512	1,633,333

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions; actual expenditure, independent quotations and market value are not established. The previously priced acquisition, graph, entity, evidence and defensive-control foundations are reused once. Third-party source entitlements, real shared persistence/queue deployment, production multi-node acceptance and legal/operational certification are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 1,870,000; model change EUR 413,488.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source README describes authorized exact-host network collection, durable leases/attempt fencing, retry and noninvasive challenge handling; execution logs not re-run at the assessed commit.

Remaining limits

A committed test harness is not PASS; no license for unrelated online sources or circumvention of challenges; original first-party title and third-party access rights require due diligence.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — An authorised evidence and entity-intelligence prototype with recoverable local work state, relationship review and controlled worker-ownership reference workflows. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-049 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
