Bio-Inspired Neural Dynamics & Active Inference Simulation Platform

Compare synthetic measurement qualifications and check declared source, rights, split and protocol prerequisites before any external benchmark admission.

Product overview

Developed neural-research software for finite synthetic qualification comparisons and bounded, data-free external benchmark entry checks.

Potential acquirers

- Computational-neuroscience research teams
- Research-software and simulation vendors
- Neural-systems methodology and evaluation groups

Documented functions

- Compose source-locked synthetic neural studies
- Compare bounded measurement and observation qualifications
- Preserve indistinguishable model alternatives
- Check declared source, rights, split and protocol conditions
- Verify bounded local payload integrity without dataset admission

Available output types

Synthetic cross-qualification and witness reports / Source-entry and local-integrity assessments / Schema-checked comparison and lineage packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 964,000 · indicative USD 1,081,030

Identified edition: 2.9.15 / qualified CPU software scope

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for 2.9.15 / qualified CPU software scope. Previously priced neural runtime, synthetic studies and scenario availability, erasure and recovery foundations are reused once. Only the added cross-qualification audit and data-free benchmark-entry software are included. Real dataset admission, scientific or clinical findings, universal numerical portability, external data rights and future phases are excluded.

• Retained qualification applies to its identified source and environment. Full replay in a different local environment still has unresolved numerical discrepancies; recipient-environment acceptance remains open.

• Cross-qualification results are finite synthetic comparisons. Data-free source-entry checks assess declarations and local integrity; they do not admit a real dataset or establish source authenticity or legal clearance.

• External scientific benchmarking remains closed. No unique biological mechanism, EEG/BCI validity, causal or clinical finding, AGI or production readiness is established.

Conditions before handover

• Freeze the exact source edition, agreed first-party work, rights and exclusions.

• Resolve exact numerical replay and full downstream qualification in the recipient environment without weakening retained checks.

• Review source-specific reproducibility, component and security evidence under agreed confidentiality.

• Complete intended-use and recipient-environment acceptance before relying on the identified outputs.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	964,000	1,081,030
Negotiation reference - low	770,500	864,039
Negotiation reference - high	1,207,500	1,354,091
Recreation cost estimate	3,436,500	3,853,691
Marketability cost scenario	3,359,179	3,766,983
Monetisation cost scenario	3,943,384	4,422,111
Risk-adjusted strategic reference	3,389,197	3,800,646
Weighted economic reference	3,505,857	3,931,468

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced neural runtime, synthetic studies and scenario availability, erasure and recovery foundations are reused once. Only the added cross-qualification audit and data-free benchmark-entry software are included. Real dataset admission, scientific or clinical findings, universal numerical portability, external data rights and future phases are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Pinned v2.9.15 Colab CPU report documents 923/923 tests and 18 focused PASS with 476 source paths reconciled; v2.9.16 r2 PR has focused 38/38 local PASS but full CPU gate FAIL / upstream Torch setup issue.

Remaining limits

No real DANDI full source dataset admission, licensed biological empirical inference, clinical validation or P4 entry; v2.9.16 unmerged and full candidate tests not passing.

Development position

BIND-AI v2.9.16 / P3q r2 — correct DANDI metadata and source identity

Acquisition evidence profile

Technical scope: V — Developed neural-research software for finite synthetic qualification comparisons and bounded, data-free external benchmark entry checks. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-077 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
