Collective Reality Engine

Explore shared fictional worlds, review the consequences of participant decisions and preserve a consistent history of each scenario.

Product overview

Local shared-world simulation with scoped fact packets, revocable knowledge grants, SQLite character-belief memory and a governed gateway that rechecks action authorization inside the write transaction.

Potential acquirers

- Interactive storytelling studios
- Game-tool developers
- Simulation research groups

Documented functions

- Maintain local world histories and offline seals
- Issue and revoke scoped fact handles
- Persist attributed beliefs in SQLite
- Admit mock-agent actions through a local governed gateway
- Recheck authorization atomically before an action commits

Available output types

Scenario worlds / Event histories / Replayable narrative records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 28,500 · indicative USD 31,960

Identified edition: 0.5.0 / G2 R3

Prototype · Scope closure required

Current scope and conditions

Agreed first-party v0.5 G2 R3 source, two authored scenarios, offline verification, revocable local knowledge and belief storage, governed admission, tests and documentation. Two authored scenarios, mock agents and fixed narrative templates. External identity, untrusted plugin isolation, freeform model grounding, distributed multiplayer and production deployment remain open. The R4 candidate is outside this price.

• Two authored scenarios, mock agents and fixed narrative templates. External identity, untrusted plugin isolation, freeform model grounding, distributed multiplayer and production deployment remain open. The R4 candidate is outside this price.

• First-party rights, exact delivery and recipient acceptance require project-specific agreement.

Conditions before handover

• Freeze the 0.5.0 / G2 R3 first-party delivery and reconcile source-specific acceptance records.

• Resolve the missing explicit rights and agreed-transfer documentation; the source policy deliberately does not grant a general software licence.

• Define the exact v0.5 / G2 R3 engine, included first-party scenario materials and delivery manifest; distinguish blueprint content from implemented narrative features.

• Reconcile component obligations and recipient acceptance of local persistence, recovery and scenario behaviour.

• Qualify independent security, workload and recovery evidence for your intended use; local fixtures are not distributed-scale proof.

• Agree any future online runtime or public event separately, including consent, accessibility, privacy and moderation requirements.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	28,500	31,960
Negotiation reference - low	22,800	25,568
Negotiation reference - high	35,625	39,950
Recreation cost estimate	95,500	107,094
Marketability cost scenario	73,058	81,927
Monetisation cost scenario	67,686	75,903
Risk-adjusted strategic reference	36,224	40,622
Weighted economic reference	64,702	72,557

Cost basis

Earlier recreation anchor retained once. Added implementation through G2 R3: 144 assumed hours at EUR 94/hour plus 15% coordination. Adopted recreation increment EUR 15,500 and seller asking increment EUR 4,500. The unmerged R4 work is excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 77,063; model change EUR 12,361.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source records G2 R2 acceptance at 139/139 CPU tests and bounded G2 R3 acceptance at 169/169, including 30 required G2 R3 cases, replay and compilation. The source reports five matched code blobs. These results apply to trusted local stores.

Remaining limits

Two authored scenarios, mock agents and fixed narrative templates. External identity, untrusted plugin isolation, freeform model grounding, distributed multiplayer and production deployment remain open. The R4 candidate is outside this price.

Development position

DRAFT CRE v0.5 G2 R4 — issuer-attested model intents and atomic admission

Acquisition evidence profile

Technical scope: P — Local shared-world simulation with scoped fact packets, revocable knowledge grants, SQLite character-belief memory and a governed gateway that rechecks action authorization inside the write transaction. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R0 — No repository licence evidence identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T1 — Implementation exists but core transfer evidence is incomplete. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-103 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
