DMT Laser Phenomenology Engine

Organise phenomenology study records, compare bounded research outputs and review controlled synthetic and recovery workflows.

Product overview

Phenomenology research software for organising observations, comparing bounded studies and verifying synthetic reference and recovery workflows.

Potential acquirers

- Perception research groups
- Scientific data teams
- Research software vendors

Documented functions

- Organise structured study records
- Compare bounded study and reference outputs
- Generate explicitly synthetic software-test subjects
- Prepare portable evidence and recovery packages
- Review source-readiness and qualification conditions

Available output types

Study records / Comparative research summaries / Synthetic test fixtures / Review and recovery packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 226,500 · indicative USD 253,997

Identified edition: 8.29.0 / implemented research extensions

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for 8.29.0 / implemented research extensions. Detailed source, rights, components and acceptance evidence are reviewed under agreed confidentiality.

• Synthetic subjects and software qualification do not establish human, biological, optical, causal or clinical results.

• Actual-data provenance, independent custody, scientific acceptance and production key governance require separate qualification.

• The proposed umbrella product identity is a roadmap; this asset remains DMT Laser Phenomenology Engine.

Conditions before handover

• Agree and freeze the exact first-party delivery edition, rights, third-party obligations and excluded content.

• Review source-specific reproducibility, component and security documentation under agreed confidentiality.

• Complete the relevant application qualification and recipient handover acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	226,500	253,997
Negotiation reference - low	183,500	205,777
Negotiation reference - high	286,000	320,720
Recreation cost estimate	1,240,000	1,390,536
Marketability cost scenario	737,800	827,369
Monetisation cost scenario	855,600	959,470
Risk-adjusted strategic reference	252,672	283,346
Weighted economic reference	717,115	804,173

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions; actual expenditure, independent quotations and market value are not established. The previously priced study, observation, governance and campaign foundations are reused once. Empirical studies, external custody, scientific findings and planned general-purpose productisation are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README documents software/evidence-governance and synthetic-research controls; merged PR #69 describes bounded archive acquisition and checksum tests. PR narrative alone is not exact-head runtime proof.

Remaining limits

No independent authorization for human participant processing, no accepted real biological measurement validation, no observational/clinical result or institutional authorization.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — Phenomenology research software for organising observations, comparing bounded studies and verifying synthetic reference and recovery workflows. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-023 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
