Electric Flight Systems Simulation & Validation Platform

Explore electric-flight concepts and compare simulated behaviour before physical testing.

Product overview

An electric-flight research foundation for early simulation and control experiments.

Potential acquirers

- Electric-flight research groups
- Simulation developers
- Engineering education providers

Documented functions

- Run electric-flight simulations
- Study altitude control
- Compare energy behaviour
- Inject modelled failures
- Record experimental telemetry

Available output types

Flight-study records / Fault scenarios / Engineering reports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 50,000 · indicative USD 56,070

Identified edition: 0.2.0

Prototype · Conditional handover

Current scope and conditions

Seller-owned first-party rights plus specifically agreed transferable software/delivery artifacts; website displays and third-party ownership rights excluded from standalone software asset value.

• Electric-flight research software. Physical aircraft, flight certification and operational approval are excluded.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	50,000	56,070
Negotiation reference - low	40,000	44,856
Negotiation reference - high	60,000	67,284
Recreation cost estimate	450,000	504,630
Marketability cost scenario	309,825	347,438
Monetisation cost scenario	258,188	289,532
Risk-adjusted strategic reference	153,622	172,272
Weighted economic reference	279,870	313,846

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 330,368; model change EUR 50,498.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README documents basic dynamics, rotor allocation, fault injection, Monte Carlo, HIL interfaces and runnable pytest.

Remaining limits

No high-fidelity flight-dynamics, airworthiness, safety, EASA certification or crewed aircraft control authorization.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — An electric-flight research foundation for early simulation and control experiments. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-032 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
