Fundamental Reality Research Platform

Check declared dataset provenance, uncertainty and split conditions; inspect a defined astronomical table format while retaining explicit source-authentication and scientific limits.

Product overview

Research software combining numerical physics-reference experiments with local dataset-governance checks, versioned evidence records and a bounded astronomical table parser.

Potential acquirers

- Scientific-software vendors
- Computational physics and cosmology research groups
- Research-methods and numerical-assurance teams

Documented functions

- Run cosmological-reference and synthetic geometry experiments
- Validate dataset manifests, declared rights and local asset integrity
- Check uncertainty, covariance and partition declarations
- Inspect bounded astronomical table records and reject malformed inputs
- Preserve versioned research records and source limitations

Available output types

Numerical reference and synthetic experiment records / Dataset-governance and local-integrity assessments / Astronomical table-format and provenance reports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 16,500 · indicative USD 18,503

Identified edition: 0.3.1 / R2A observational-source parser and governance

Research software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation. Previously priced numerical-reference, synthetic geometry and record-assurance foundations are retained once. The increment covers only implemented dataset-governance and table-format software. Other portfolio projects, original observational data rights, authenticated scientific ingestion, novel physics, future modules and production operations are excluded.

• Retained source-matched second-runtime records cover the implemented numerical, record-contract, dataset-governance and table-parser software. Current local regression replay also passes; full observational-data admission remains open.

• The astronomical test fixture is a web transcription, not the authenticated original source file. Original-file provenance, product-specific rights, full scientific covariance, instrument and selection qualification remain unresolved.

• Reference models and software checks do not establish emergent spacetime, cosmic origins, a new physical theory or an accepted cosmological likelihood. Recipient and intended-use acceptance require separate evidence.

Conditions before handover

• Freeze the specific first-party source, delivery documents, transferable rights and exclusions.

• Review retained source-specific qualification and any further independent or intended-use acceptance.

• Keep third-party rights, future capabilities and empirical or competitive claims outside the agreed proprietary scope.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	16,500	18,503
Negotiation reference - low	13,000	14,578
Negotiation reference - high	20,000	22,428
Recreation cost estimate	53,500	59,995
Marketability cost scenario	20,691	23,203
Monetisation cost scenario	13,643	15,299
Risk-adjusted strategic reference	4,228	4,741
Weighted economic reference	21,722	24,359

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced numerical-reference, synthetic geometry and record-assurance foundations are retained once. The increment covers only implemented dataset-governance and table-format software. Other portfolio projects, original observational data rights, authenticated scientific ingestion, novel physics, future modules and production operations are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source evidence audit describes 123/123 tests and clean-directory replay, 28/28 Git source blobs, and 5 matching JSON outputs.

Remaining limits

NASA original raw bytes, licensing, covariance/Fisher controls and scientific dataset admission not established. R3 blocked; no novel physics result.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: R — Research software combining numerical physics-reference experiments with local dataset-governance checks, versioned evidence records and a bounded astronomical table parser. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Source-specific diligence and recipient acceptance remain separate.

Rights and component obligations: R1 — Repository licence file identified. Source-specific diligence and recipient acceptance remain separate.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Source-specific diligence and recipient acceptance remain separate.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. Source-specific diligence and recipient acceptance remain separate.

Buyer information and next step

Quote TA-IP-112 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
