Urban Digital Twin Intelligence & Simulation Platform

An offline urban digital-twin research workbench with geospatial import, deterministic mobility fixtures, paired intervention scenarios, local browser exploration and replayable evidence.

Product overview

An offline urban digital-twin research workbench with geospatial import, deterministic mobility fixtures, paired intervention scenarios, local browser exploration and replayable evidence.

Potential acquirers

- Urban simulation developers
- Planning research groups
- Geospatial software vendors

Documented functions

- Import declared geospatial inputs into a local world model
- Explore the local world in a browser interface
- Run deterministic mobility and intervention scenarios
- Compare paired baseline/intervention runs with explicit seeds
- Export and replay scenario evidence and local records

Available output types

Scenario maps / Mobility histories / Study packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 200,000 · indicative USD 224,280

Identified edition: 0.1.0 / paired scenario comparison and canonical identity

Prototype · Conditional handover

Current scope and conditions

The specifically agreed local first-party workbench, paired scenario comparison and documentation retain the prior low-confidence recreation anchor without a naming or version premium. Real-city measurement rights, calibrated planning predictions, hosting and future modules are excluded.

• Current local replay passes its executed tests; optional geospatial-backend checks are skipped in this environment. Paired scenario comparison and product identity tests are included.

• Bundled Maastricht geometry is schematic and traffic behaviour is illustrative. A surveyed city reconstruction, calibrated traffic model and validated planning predictions are not supplied.

• The new canonical name retains TA-IP-087 and Mila. Real-world data admission, independent recipient acceptance and production operation remain separate.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	200,000	224,280
Negotiation reference - low	160,000	179,424
Negotiation reference - high	250,000	280,350
Recreation cost estimate	1,000,000	1,121,400
Marketability cost scenario	1,026,375	1,150,977
Monetisation cost scenario	860,625	965,105
Risk-adjusted strategic reference	860,565	965,038
Weighted economic reference	928,598	1,041,330

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance. Review on 2026-11-03: The specifically agreed local first-party workbench, paired scenario comparison and documentation retain the prior low-confidence recreation anchor without a naming or version premium. Real-city measurement rights, calibrated planning predictions, hosting and future modules are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 1,147,402; model change EUR 218,804.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

v0.1 repository validation records 52 Python tests plus local HTTP/Chromium fixture tests on 3 Oct 2026; synthetic deterministic mobility and evidence replay.

Remaining limits

Schematic synthetic geometry; uncalibrated traffic, incomplete OSM coverage, no 1:1 fidelity.
Post-rename exact-source PR #6 validation remains pending.

Development position

fix: post-rename product consistency and synthetic evidence qualification

Acquisition evidence profile

Technical scope: P — An offline urban digital-twin research workbench with geospatial import, deterministic mobility fixtures, paired intervention scenarios, local browser exploration and replayable evidence. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Current local replay passes its executed tests; optional geospatial-backend checks are skipped in this environment. Paired scenario comparison and product identity tests are included. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-087 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
