Machine Cognition Research Framework

Study adaptation and decision behaviour through repeatable experiments and comparative review.

Product overview

A bounded cognition research framework for repeatable memory and adaptation experiments.

Potential acquirers

- Cognition research groups
- AI research teams
- Scientific software developers

Documented functions

- Run controlled cognitive experiments
- Study memory and uncertainty
- Compare adaptation conditions
- Review component comparisons
- Export research evidence

Available output types

Experiment records / Comparative studies / Research dossiers

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 85,000 · indicative USD 95,319

Identified edition: 0.8.0

Prototype · Conditional handover

Current scope and conditions

Existing first-party 0.8.0 source (default-branch snapshot), including the described implemented increment. General intelligence, human equivalence, open-world performance, autonomous operation and separate commercial demand are not established or priced.

• Computational cognition research. General human-equivalent intelligence is not an established capability.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	85,000	95,319
Negotiation reference - low	69,000	77,377
Negotiation reference - high	106,500	119,429
Recreation cost estimate	690,000	773,766
Marketability cost scenario	580,635	651,124
Monetisation cost scenario	395,888	443,949
Risk-adjusted strategic reference	287,898	322,849
Weighted economic reference	468,569	525,453

Cost basis

The recreation anchor combines an identified base with separately scoped implementation work. The base remains a seller assumption; the scoped component has a role/work-package reproduction budget. Each component is counted once.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 557,341; model change EUR 88,772.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source describes explicit count adaptation, TF-IDF predictive-state linear model, source compilation and testing gate; no new independent checkout run.

Remaining limits

No consciousness, AGI, broad autonomous cognition, large neural world model, or externally calibrated forecasting.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A bounded cognition research framework for repeatable memory and adaptation experiments. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-020 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
