Plant Environment Decision Intelligence Platform

Assess plants against site conditions, manage versioned planting plans and compare the evidence behind retained assessment results.

Product overview

A plant-environment decision workbench for site suitability, versioned planting plans and evidence-backed comparison of retained assessments.

Potential acquirers

- Garden-planning software vendors
- Horticultural service firms
- Landscape planning teams

Documented functions

- Assess several candidate species against one site
- Manage owner-scoped projects, sites and planting zones
- Retain versioned planting-plan scenarios
- Export assessment inputs, results and integrity records
- Compare retained scenarios and explain material differences

Available output types

Viability reports / Planning recommendations / Data-quality records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 300,000 · indicative USD 336,420

Identified edition: Retained assessment-comparison build

Developed software · Conditional handover

Current scope and conditions

Existing first-party retained assessment-comparison build source (default-branch snapshot), including the described implemented increment. The newest comparison backend still requires its own native PostgreSQL qualification. Regional coverage, field agronomy, live weather acceptance and production deployment are excluded.

• Plant and site decision support. Local agronomic validation and production acceptance remain separately scoped.

• PEDIP main includes versioned projects, retained evidence, comparison and Go dependency checksums (go.sum). Earlier native PostgreSQL receipts do not qualify the latest comparison route. EUR 300,000 is a dated seller reference following an older EUR 270,000 source dossier with a partial EUR 100,000 scoped reproduction budget. SBOM, rights, field-data and deployment gates remain open.

Conditions before handover

• The source now contains go.sum; verify locked module hashes at handover and compile a full SBOM and licence review.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• An explicit delivery manifest and handover scope remain to be agreed.

• Review confidential security and credential-handling materials within the agreed diligence and transfer scope.

• Validate the comparison endpoint on native PostgreSQL at the specific proposed delivery SHA.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	300,000	336,420
Negotiation reference - low	239,000	268,015
Negotiation reference - high	378,000	423,889
Recreation cost estimate	1,000,000	1,121,400
Marketability cost scenario	1,265,000	1,418,571
Monetisation cost scenario	1,485,000	1,665,279
Risk-adjusted strategic reference	1,276,304	1,431,247
Weighted economic reference	1,246,706	1,398,056

Cost basis

The recreation anchor combines an identified base with separately scoped implementation work. The base remains a seller assumption; the scoped component has a role/work-package reproduction budget. Each component is counted once.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source describes authenticated bearer/JWT-scoped project assessment capture, immutable SHA-tagged records and versioned export; repo-wide exact-source runtime execution not reproduced.

Remaining limits

Actual botany/agronomy accuracy, complete weather provenance, legal data rights and regulatory field decision acceptance are not independently qualified.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — A plant-environment decision workbench for site suitability, versioned planting plans and evidence-backed comparison of retained assessments. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-008 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
