Adaptive Systems Intelligence Platform

Bring evidence, policies and decisions together so your team can review the basis for its work.

Product overview

A local evidence-governed runtime with workspaces, cases, relationships, obligations and authority gates. Evidence expiry, revocation and supersession feed decisions; digest-verified bundles and SQLite snapshot history support controlled restore and backup.

Potential acquirers

- Governance software vendors
- Enterprise architecture teams
- Systems consultancies

Documented functions

- Model obligations, authority and risk/control relationships
- Track evidence expiry, revocation and supersession
- Organise workspaces, cases and relationship graphs
- Export and restore integrity-checked state bundles
- Retain SQLite snapshots, verify stored integrity and recover backups

Available output types

Governed case and decision records / Evidence and audit histories / Portable state bundles and verified local backups

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 201,500 · indicative USD 225,962

Identified edition: 0.1.0 / RC1

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party RC1 local governance runtime, SQLite reference persistence, domain packs, CLI and retained developer evidence. Production controls and independent certification require separate scope.

• A local reference runtime; production security, identity, availability and deployment acceptance require separate qualification.

• Integrity records do not establish substantive truth, compliance or legal authority.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	201,500	225,962
Negotiation reference - low	161,000	180,545
Negotiation reference - high	252,000	282,593
Recreation cost estimate	1,158,500	1,299,142
Marketability cost scenario	1,245,677	1,396,902
Monetisation cost scenario	1,348,928	1,512,688
Risk-adjusted strategic reference	1,044,439	1,171,234
Weighted economic reference	1,174,100	1,316,636

Cost basis

The recreation estimate contains EUR 1,150,000 of previously scoped work plus EUR 8,500 for RC1 local persistent governance runtime, giving EUR 1,158,500. This increment assumes 80 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. Asking/negotiation inputs preserve prior asking/cost relationships, rounded half-up to EUR 500. All effort and prices remain seller assumptions; market value and actual expenditure are not established. Previously described obligation, authority, risk/control and domain-pack foundations are reused and excluded from this increment. Production security, high availability, enterprise identity, certification and legal/regulatory conclusions are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 1,459,949; model change EUR 285,849.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

RC1 evidence record documents 29/29 local tests and 30 reconstructed Git blob SHA matches, domain-pack checks and SQLite initialization.

Remaining limits

Domain packs do not certify legal/safety control effectiveness; no production database encryption, row-level access, KMS, SSO or real-world compliance certification.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A local evidence-governed runtime with workspaces, cases, relationships, obligations and authority gates. Evidence expiry, revocation and supersession feed decisions; digest-verified bundles and SQLite snapshot history support controlled restore and backup. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-083 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
