Reality Substrate Hypothesis Testing Platform

Define bounded research hypotheses, compare source-bound synthetic models and review covariance-aware methodological evidence with explicit scientific limits.

Product overview

An independent research-software framework for declared hypothesis portfolios, source-bound synthetic model comparisons, covariance-aware methodological controls and bounded astronomical-data audits.

Potential acquirers

- Scientific research organisations
- Research-software vendors
- Computational-physics and methodology teams

Documented functions

- Run clearly labelled synthetic methodological experiments
- Declare bounded hypothesis portfolios and prediction provenance
- Review dimension-qualified synthetic model comparisons
- Compare fixed models using declared covariance assumptions
- Audit supported local astronomical files and replay evidence

Available output types

Synthetic experiment and model-comparison reports / Hypothesis and prediction records / Statistical-method and source-data audit summaries / Reproducibility packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 14,500 · indicative USD 16,260

Identified edition: 0.18.0

Research software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for 0.18.0. The previously priced synthetic experiments, astronomical-file audits, replay and hypothesis registry are reused once. Only the added bounded portfolio, dimension/source checks and covariance-aware synthetic comparison software is included. Empirical discoveries, physical theories, calibrated instrument response, third-party datasets and future model engines are excluded.

• A research-software framework, not a simulation detector or an empirically validated physical theory.

• Synthetic model comparisons and covariance controls do not establish new physics, a scientifically calibrated null, instrument calibration or an external simulator.

• The broader hypothesis families and cross-domain programme remain research directions; implemented bounded methodology is not a collection of validated physical model engines.

Conditions before handover

• Freeze the exact first-party research-software edition, delivery manifest and rights.

• Qualify numerical methods and scientific assumptions for the recipient use; software checks do not validate physical claims.

• Review data/component rights and agree independent intended-use and delivery acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	14,500	16,260
Negotiation reference - low	12,000	13,457
Negotiation reference - high	18,500	20,746
Recreation cost estimate	49,500	55,509
Marketability cost scenario	19,144	21,468
Monetisation cost scenario	12,623	14,155
Risk-adjusted strategic reference	3,912	4,387
Weighted economic reference	20,098	22,538

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions; actual expenditure, independent quotations and market value are not established. The previously priced synthetic experiments, astronomical-file audits, replay and hypothesis registry are reused once. Only the added bounded portfolio, dimension/source checks and covariance-aware synthetic comparison software is included. Empirical discoveries, physical theories, calibrated instrument response, third-party datasets and future model engines are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README records prior v0.17 263/263 full CPU suite twice at pinned source; v0.18 adds 25 focused synthetic covariance comparisons but exact new two-pass complete suite pending.

Remaining limits

No genuine Fermi instrument/likelihood calibration, observational evidence of physical substrate, preregistered real-world detection or complete current-source v0.18 acceptance.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: R — An independent research-software framework for declared hypothesis portfolios, source-bound synthetic model comparisons, covariance-aware methodological controls and bounded astronomical-data audits. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R1 — Repository licence file identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-110 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
