Signal Processing Universal Framework

Analyse your signals, compare processing results and keep your findings traceable.

Product overview

A signal-analysis foundation for repeatable studies across multiple application domains.

Potential acquirers

- Scientific software vendors
- Industrial analysis teams
- Signal research groups

Documented functions

- Organise supplied signal records
- Run repeatable processing studies
- Review signal quality
- Coordinate domain-specific analysis
- Retain traceable results

Available output types

Analysis records / Domain reports / Processing histories

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 150,000 · indicative USD 168,210

Identified edition: 1.23.0

Developed software · Conditional handover

Current scope and conditions

Existing first-party 1.23.0 source (default-branch snapshot), including the described implemented increment. Live instruments/feeds, field/domain accuracy, scientific certification and production deployment are excluded. Historical features are not counted again.

• Target-environment suitability, deployment acceptance and any required independent qualification are agreed separately.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	150,000	168,210
Negotiation reference - low	119,000	133,447
Negotiation reference - high	187,500	210,263
Recreation cost estimate	500,000	560,700
Marketability cost scenario	603,750	677,045
Monetisation cost scenario	742,500	832,640
Risk-adjusted strategic reference	609,145	683,095
Weighted economic reference	607,451	681,196

Cost basis

The recreation anchor combines an identified base with separately scoped implementation work. The base remains a seller assumption; the scoped component has a role/work-package reproduction budget. Each component is counted once.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source documents cross-domain adapters, immutable window records and portable hash-bound CLI verification; exact current integrated source gate not reexecuted.

Remaining limits

Reference signal detectors are not calibrated weather, clinical, finance, seismic, RF or safety-certified measurements.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — A signal-analysis foundation for repeatable studies across multiple application domains. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-016 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
