StabilityMesh

Compare resilience scenarios for your distributed systems and study how defensive responses affect the simulation.

Product overview

A simulation environment for examining service disruption and controlled defensive responses.

Potential acquirers

- Platform engineering teams
- Reliability teams
- Infrastructure software vendors

Documented functions

- Model coupled service failures
- Observe pressure and system health
- Compare defensive resource choices
- Study degraded operating conditions
- Review historical scenario results

Available output types

Resilience dashboards / Scenario histories / Response comparisons

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 205,000 · indicative USD 229,887

Identified edition: 1.9.1

Developed software · Conditional handover

Current scope and conditions

Current first-party v1.9.1 main software only. The dated EUR 205,000 asking figure and EUR 871,500 recreation estimate expressly cover the v1.9.1 main software and its evidence/readiness work. The unmerged v1.10 event and partial-observation contracts are excluded; no newly accepted work package or market sale supports an increase.

• An engineering and simulation asset. Environment-specific calibration and operational acceptance are separate requirements.

• The dated EUR 205,000 asking figure and EUR 871,500 recreation estimate expressly cover the v1.9.1 main software and its evidence/readiness work. The unmerged v1.10 event and partial-observation contracts are excluded; no newly accepted work package or market sale supports an increase.

Conditions before handover

• Reconcile exact main/candidate SHA, evidenced first-party scope, and seller asking-price basis before any binding AS-IS transfer.

• Agree exact first-party rights, component obligations and excluded content in the definitive agreement.

• Freeze a release-specific delivery manifest and complete recipient acceptance.

• Complete independent security review or expressly accept its absence within the local reference scope.

• Run the full dependency-based release suite and retain its source-pinned receipt.

• Qualify genuinely labeled operational outcomes and the intended environment; external workload traces alone do not supply those labels.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	205,000	229,887
Negotiation reference - low	164,000	183,910
Negotiation reference - high	256,500	287,639
Recreation cost estimate	871,500	977,300
Marketability cost scenario	1,052,336	1,180,090
Monetisation cost scenario	1,000,046	1,121,452
Risk-adjusted strategic reference	1,061,740	1,190,635
Weighted economic reference	999,960	1,121,355

Cost basis

The EUR 871,500 recreation estimate consists of a EUR 850,000 base and a EUR 21,500 scoped implementation budget. The seller asking reference is EUR 205,000. Effort is estimated, not logged time or actual expenditure. Market value is not established.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README, acquisition/transfer scope and outcome-calibration contract checked. The v1.10 draft reports 47 isolated fixture tests but complete exact-head release validation remains pending.

Remaining limits

Measured workload traces do not themselves establish outcome truth, production reliability, causal effectiveness, independently assessed security or completed rights transfer.

Development position

DRAFT v1.10.0: partial observations and Google v3 event contracts

Acquisition evidence profile

Technical scope: V — A simulation environment for examining service disruption and controlled defensive responses. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-003 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
