Temporal Physics & Causality Research Platform

Explore causal-order questions through controlled computational-physics experiments.

Product overview

Seeded finite-sample null calibration, signed likelihood statistics, diagnostic nuisance profiles and formal-witness registration contracts.

Potential acquirers

- Physics research groups
- Metrology teams
- Scientific software developers

Documented functions

- Define bounded research studies
- Review experimental assumptions
- Analyse declared observation counts
- Compare hypothesis evidence
- Retain reproducible study records

Available output types

Research protocols / Analysis reports / Hypothesis review dossiers

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 50,500 · indicative USD 56,631

Identified edition: 0.17.0 / PTCG-1N

Research software · Conditional handover

Current scope and conditions

Specifically agreed first-party 0.17.0 / PTCG-1N source, documentation and retained evidence: Seeded finite-sample null calibration, signed likelihood statistics, diagnostic nuisance profiles and formal-witness registration contracts. Formal causal-witness proof, physical-projection bootstrap and measured apparatus covariance remain open. No physical causal nonseparability or time-machine claim.

- Formal causal-witness proof, physical-projection bootstrap and measured apparatus covariance remain open. No physical causal nonseparability or time-machine claim.
- First-party rights, exact delivery and recipient acceptance require project-specific agreement.

Conditions before handover

- Freeze the 0.17.0 / PTCG-1N first-party delivery and reconcile source-specific acceptance records.
- Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.
- A detailed component inventory and licensing report are required for the agreed delivery scope.
- A security assessment or an explicit statement of its absence is required before acceptance.
- An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	50,500	56,631
Negotiation reference - low	40,400	45,305
Negotiation reference - high	63,125	70,788
Recreation cost estimate	1,053,000	1,180,834
Marketability cost scenario	407,248	456,688
Monetisation cost scenario	268,515	301,113
Risk-adjusted strategic reference	83,212	93,314
Weighted economic reference	427,527	479,429

Cost basis

Earlier recreation anchor retained once; its prior coverage and uncertainty remain. Added only the individually described implementation work. 32 assumed hours at EUR 94/hour, 15% coordination allowance; EUR 3,000 adopted recreation increment and EUR 500 asking-reference increment. No premium for version labels, test counts, scientific claims, future work or unrelated assets.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 503,363; model change EUR 75,836.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

The PTCG-1N acceptance contract requires retained negative statistics, explicit null calibration and preregistered witness identity. Evidence is synthetic computational scope.

Remaining limits

Formal causal-witness proof, physical-projection bootstrap and measured apparatus covariance remain open. No physical causal nonseparability or time-machine claim.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: R — Seeded finite-sample null calibration, signed likelihood statistics, diagnostic nuisance profiles and formal-witness registration contracts. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-058 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
