TLS Virtual

Explore rotating-machine behaviour in simulation and review diagnostic demonstrations and reports.

Product overview

A rotating-machine simulation and diagnostic demonstrator with an explorable twin view.

Potential acquirers

- Industrial software vendors
- Maintenance research teams
- Technical training providers

Documented functions

- Simulate healthy and degraded machines
- Explore fault scenarios
- Review explanatory diagnostics
- Retain machine-state histories
- Produce traceable reports

Available output types

Diagnostic demonstrations / Twin snapshots / Scenario reports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 195,000 · indicative USD 218,673

Identified edition: 1.0.0

Developed software · Conditional handover

Current scope and conditions

TLS Virtual first-party 1.0.0 simulation code and assets under expressly agreed terms. No physical sensor/rotor calibration, predictive-maintenance accuracy or production operations acceptance is included.

• Target-environment suitability, deployment acceptance and any required independent qualification are agreed separately.

• TLS Virtual 1.0.0 is an executable rotating-machine simulation and diagnostic demonstrator. The 22 July 2026 retained build verification records 15 pytest successes, a passing wheel/JavaScript/CLI/API smoke, and eight deterministic simulated scenarios. It does not validate real machinery, sensor calibration, predictive-maintenance accuracy or deployment suitability. The EUR 195,000 ask and EUR 650,000 recreation estimate are dated seller references without a complete role/work-package reproduction budget.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• An explicit delivery manifest and handover scope remain to be agreed.

• Rerun release 1.0.0 at exact delivery SHA and test with real calibrated machine/sensor inputs before claiming field diagnostic performance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	195,000	218,673
Negotiation reference - low	155,000	173,817
Negotiation reference - high	245,000	274,743
Recreation cost estimate	650,000	728,910
Marketability cost scenario	784,875	880,159
Monetisation cost scenario	965,250	1,082,431
Risk-adjusted strategic reference	791,889	888,024
Weighted economic reference	789,686	885,554

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Current README offers no source-pinned release gates, numerical benchmarking or current implementation acceptance evidence; further module/test inspection required.

Remaining limits

Real machine dynamics, calibration, executable quality and production use NOT_ESTABLISHED; former developed-software label not revalidated.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — A rotating-machine simulation and diagnostic demonstrator with an explorable twin view. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-010 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
