TrueLane Ink-Core

Trace studio materials and consent, manage inventory and deposit workflow state, and review bounded persistence and migration safeguards.

Product overview

Tattoo-studio operations software with tenant-scoped transactional persistence adapters and an isolated PostgreSQL qualification harness.

Potential acquirers

- Tattoo-industry software vendors
- Studio-management platform developers
- Specialist operations software businesses

Documented functions

- Record material and consent traceability
- Review inventory and deposit-state transitions
- Apply tenant-scoped transactional persistence rules
- Detect migration drift and ordering errors
- Prepare isolated database qualification runs

Available output types

Traceability and workflow records / Inventory and deposit-state reports / Migration and qualification assessments

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 165,500 · indicative USD 185,592

Identified edition: Phase 2B.2A / PostgreSQL qualification harness

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for Phase 2B.2A / PostgreSQL qualification harness. The previously priced studio, geometry, workflow, authentication and migration foundations are reused once. Added first-party persistence adapters and qualification tooling are included. Real PostgreSQL operation, production tenant migration, payment services, clinical or regulatory acceptance, hosting and third-party ownership rights are excluded.

• The engineering baseline and local software checks do not establish real PostgreSQL runtime acceptance; that remains an open delivery gate.

• Recipient deployment, tenant migration, security review, studio compliance, payment-provider integration and real-world stencil suitability require separate qualification.

• The pinned database driver and other third-party components retain their own terms; the offered proprietary value covers first-party work.

Conditions before handover

• Freeze the exact source edition, agreed first-party work, rights and exclusions.

• Execute and accept the isolated real PostgreSQL runtime qualification before claiming database-specific delivery readiness.

• Review source-specific reproducibility, component and security evidence under agreed confidentiality.

• Complete intended-use and recipient-environment acceptance before relying on the identified outputs.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	165,500	185,592
Negotiation reference - low	134,500	150,828
Negotiation reference - high	207,000	232,130
Recreation cost estimate	672,000	753,581
Marketability cost scenario	772,800	866,618
Monetisation cost scenario	997,920	1,119,067
Risk-adjusted strategic reference	779,706	874,362
Weighted economic reference	795,041	891,559

Cost basis

The retained expressly priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. The previously priced studio, geometry, workflow, authentication and migration foundations are reused once. Added first-party persistence adapters and qualification tooling are included. Real PostgreSQL operation, production tenant migration, payment services, clinical or regulatory acceptance, hosting and third-party ownership rights are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README documents studio record/consent workflows and local validation conventions; source inspection did not independently execute full PostgreSQL/toolchain or customer workflows.

Remaining limits

No live customer-data security audit, Dutch/EU privacy compliance certification, payment-network authority, medical device qualification or target PostgreSQL compatibility.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — Tattoo-studio operations software with tenant-scoped transactional persistence adapters and an isolated PostgreSQL qualification harness. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-050 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
