Advanced General-Purpose AI Systems Platform

A proprietary AI research and training-control platform with a deterministic core, reviewed model inputs, optional training workers and bounded adapter/checkpoint verification.

Product overview

A proprietary AI research and training-control platform with a deterministic core, reviewed model inputs, optional training workers and bounded adapter/checkpoint verification.

Potential acquirers

- AI product companies
- AI research groups
- Enterprise model teams

Documented functions

- Review model and training-asset declarations
- Run deterministic model-worker and evaluation contracts
- Exercise bounded training, distillation and preference workflows
- Verify low-rank adapter export and merge equivalence
- Retain resumable checkpoint and provenance records

Available output types

Study records / Candidate comparisons / Model-governance dossiers

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 310,000 · indicative USD 347,634

Identified edition: 5.8.0-alpha.1 / current canonical product identity

Developed software · Conditional handover

Current scope and conditions

The previously priced first-party training-control and bounded adapter/checkpoint implementation is retained once. The current change is product naming and packaging metadata; it receives no monetary premium. External model weights, data rights, CUDA qualification, frontier performance and operating services remain excluded.

• The current local CPU suite passes its executed tests with the optional CPU training dependency installed. Built-in model and data fixtures are deliberately small verification assets.

• Earlier source-specific CUDA records retain their original scope. Current adapter CUDA/Drive acceptance, larger-model quality and independent comparative performance remain open.

• The new product name preserves TA-IP-013 and Thalia. No frontier-model capability, autonomous scientific success or deployed service is established.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	310,000	347,634
Negotiation reference - low	248,000	278,107
Negotiation reference - high	388,000	435,103
Recreation cost estimate	1,040,000	1,166,256
Marketability cost scenario	1,315,600	1,475,314
Monetisation cost scenario	1,544,400	1,731,890
Risk-adjusted strategic reference	1,327,356	1,488,497
Weighted economic reference	1,296,575	1,453,979

Cost basis

Some dated work-package assumptions are disclosed, but they do not reconstruct the complete retained recreation anchor. A complete scope-specific budget is required. Review on 2026-11-03: The previously priced first-party training-control and bounded adapter/checkpoint implementation is retained once. The current change is product naming and packaging metadata; it receives no monetary premium. External model weights, data rights, CUDA qualification, frontier performance and operating services remain excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source reports T4 CUDA v5.6 distillation exact-resume and repeated digest, with v5.8 CUDA checkpoint/report among next gates.

Remaining limits

Tiny rule-teacher and dataset only; no frontier-class foundation model, large-model performance or full v5.8 acceptance.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — A proprietary AI research and training-control platform with a deterministic core, reviewed model inputs, optional training workers and bounded adapter/checkpoint verification. The offered edition and material boundaries govern review.

Evidence and validation: E4 — The current local CPU suite passes its executed tests with the optional CPU training dependency installed. Built-in model and data fixtures are deliberately small verification assets. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-013 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
