Universal Operations Orchestration & Intelligence Platform

Model your operations, compare resource and workflow scenarios, and review proposed decisions before authorising execution.

Product overview

An operations-orchestration prototype for reviewable resources, scenarios and authorised work.

Potential acquirers

- Operations software vendors
- Enterprise planning teams
- Workflow developers

Documented functions

- Model resources and prerequisites
- Review capacity and deadlines
- Record authorised task progress
- Compare proposed scenarios
- Rank declared candidate plans

Available output types

Operational models / Scenario comparisons / Decision evidence records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 27,000 · indicative USD 30,278

Identified edition: 0.4.0

Prototype · Conditional handover

Current scope and conditions

Existing first-party v0.4 offline operational modelling, planning, local event memory, controlled recovery, portable evidence and non-mutating policy-proposal software, tests and documentation. External actuation, authenticated identities, externally certified custody, deployed multi-user SaaS, production optimisation or autonomous execution and future development are excluded.

• An operations-planning prototype. Live infrastructure operation and production execution require separate acceptance.

Conditions before handover

• Agree the exact v0.4 source, local software delivery manifest, supported environment and recipient acceptance checks.

• Reconcile component and build-tool obligations and the included first-party rights; the interpreter and external tooling remain third-party material.

• Independently preserve and reconcile custody evidence for your intended workflow; local controls do not authenticate real people or organisations.

• Qualify workload size, recovery, security and operating limits beyond the small local examples.

• Define any future hosting, authentication, integration or real-world action system separately; none is included as a deployed service.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	27,000	30,278
Negotiation reference - low	21,600	24,222
Negotiation reference - high	33,750	37,847
Recreation cost estimate	90,000	100,926
Marketability cost scenario	75,735	84,929
Monetisation cost scenario	69,863	78,344
Risk-adjusted strategic reference	37,552	42,111
Weighted economic reference	64,763	72,625

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 77,557; model change EUR 12,794.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source documents role-based in-process START/COMPLETE transitions, dependency/constraint checks, deterministic scenario ranking and unsigned portable replay records.

Remaining limits

Not production SaaS, external actor authentication, real autonomous operations executor, financial ledger or global solver; unsigned custody anchors need separately trusted retention.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — An operations-orchestration prototype for reviewable resources, scenarios and authorised work. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-102 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
