Universal Property Intelligence Platform

Structure property and asset evidence, distinguish facts from assumptions, and prepare replacement-cost summaries.

Product overview

A local property-evidence core with hierarchical asset records, structured CSV/JSON ingestion, explicit observation types, replacement-cost ranges and deterministic reconciliation exports.

Potential acquirers

- Property documentation software teams
- Insurance evidence specialists
- Facilities and estate inventory teams

Documented functions

- Organise property, floor, room and asset hierarchies
- Import structured evidence with unit and currency normalization
- Distinguish observations, declarations and inferences
- Review duplicate candidates and deterministic identities
- Export evidence graphs and replacement-cost ranges

Available output types

Property and contents registers / Replacement-cost summaries / Evidence-linked reports and exports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 6,000 · indicative USD 6,728

Identified edition: 0.2.0

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation, documentation and retained evidence for 0.2.0. Third-party software, datasets, models, content, service entitlements and future qualification remain subject to separate terms.

• Opaque document registration does not establish trained vision, automatic document understanding, sensor-derived property truth or an insurance appraisal.

Conditions before handover

• Agree exact first-party rights, component obligations and excluded content in the definitive agreement.

• Freeze a release-specific delivery manifest and complete recipient acceptance.

• Complete independent security review or expressly accept its absence within the local reference scope.

• Qualify realistic, permissioned property evidence, strengthen hash/ontology checks and agree rights and recipient acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	6,000	6,728
Negotiation reference - low	4,500	5,046
Negotiation reference - high	7,500	8,411
Recreation cost estimate	18,500	20,746
Marketability cost scenario	14,153	15,871
Monetisation cost scenario	13,736	15,404
Risk-adjusted strategic reference	7,017	7,869
Weighted economic reference	12,659	14,196

Cost basis

Recreation estimate: EUR 12,500 retained scope component plus EUR 6,000 for the explicitly scoped implementation work budget, giving EUR 18,500. The scoped budget assumes 56 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has its own disclosed work-package estimate; overlapping work must not be added twice. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README describes local JSON/CSV document registration, SHA-bound evidence registry and canonical property room/asset graph with source participation logs.

Remaining limits

Hashed documents may not have been semantically interpreted; no independently verified valuation, actual building condition, insurer acceptance or production SaaS.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A local property-evidence core with hierarchical asset records, structured CSV/JSON ingestion, explicit observation types, replacement-cost ranges and deterministic reconciliation exports. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R1 — Repository licence file identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-106 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
