Quantum Cryptanalysis Engineering Platform

Compare bounded factorisation experiments and quantum-resource engineering assumptions with reproducible research evidence.

Product overview

QCEP is a research platform for bounded factorisation, resource-estimation scenarios, physical route/factory co-search and stochastic inventory studies with explicit calibration limits.

Potential acquirers

- Quantum-computing research teams
- Scientific software vendors
- Mathematical research groups

Documented functions

- Run bounded factorisation and arithmetic studies
- Compare physical routes, factories and corridor scenarios
- Study stochastic inventory and refinement policies
- Review held-out resource-model limitations
- Reproduce installed CLI and package-parity checks

Available output types

Feasibility reports / Resource comparisons / Study records

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 152,000	**Developed software**

Current scope and conditions

Existing software offered for evaluation against an agreed use and delivery scope.

Available for acquisition discussion

Identified edition: 0.23.0

• No calibrated QPU forecast, ECDLP/secp256k1 circuit, real-wallet targeting capability, universal hardware advantage or completed post-quantum security assessment is established.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-042 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-31. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	152,000	169,814
Negotiation reference - low	121,500	135,740
Negotiation reference - high	192,500	215,061
Recreation cost estimate	710,000	793,212
Marketability cost scenario	543,150	606,807
Monetisation cost scenario	543,150	606,807
Risk-adjusted strategic reference	324,072	362,053
Weighted economic reference	508,185	567,744

Milestone-conditioned reference

Not established. No independently supported higher maturity amount or new attributable market/income evidence is established.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

Recreation estimate: EUR 700,000 retained scope component plus EUR 10,000 for the explicitly scoped implementation work budget, giving EUR 710,000. The scoped budget assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Partial scoped budget; retained anchor remains provisional. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
