Adaptive Network Resilience Intelligence Platform

Compare network recovery options, resource constraints and scenario robustness before deciding what to investigate or build.

Product overview

A research platform for evaluating network disruption and recovery choices with traceable comparative outputs.

Potential acquirers

- Infrastructure engineering teams
- Network research groups
- Resilience consultancies

Documented functions

- Model network disruption and recovery scenarios
- Compare bounded repair and resource options
- Review recovery-option trade-offs
- Assess scenario robustness
- Export traceable evaluation summaries

Available output types

Scenario comparisons / Recovery-option summaries / Evaluation reports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 99,000 · indicative USD 111,019

Identified edition: 3.7.0

Developed software · Scope closure required

Current scope and conditions

Current first-party main software only as independently defined from unmerged development. The EUR 99,000 asking reference was calculated for v3.7.0 and separately scoped development increments (EUR 21,000 assumed work on EUR 520,000 legacy base). Main has v3.7.0 but later decision-frontier/leave-one-out candidate work has not been merged. Do not present EUR 99,000 as an independently assessed v3.7-only value; no additional uplift is supported.

• Research simulations and software checks do not establish physical network resilience or universal optimisation.

• Development extensions are offered separately from the published release and require delivery-specific acceptance.

• The EUR 99,000 asking reference was calculated for v3.7.0 and separately scoped development increments (EUR 21,000 assumed work on EUR 520,000 legacy base). Main has v3.7.0 but later decision-frontier/leave-one-out candidate work has not been merged. Do not present EUR 99,000 as an independently assessed v3.7-only value; no additional uplift is supported.

Conditions before handover

• Reconcile exact main/candidate SHA, evidenced first-party scope, and seller asking-price basis before any binding AS-IS transfer.

• Agree and freeze the exact first-party delivery edition, rights, third-party obligations and excluded content.

• Review source-specific reproducibility, component and security documentation under agreed confidentiality.

• Complete the relevant application qualification and recipient handover acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	99,000	111,019
Negotiation reference - low	78,000	87,469
Negotiation reference - high	125,000	140,175
Recreation cost estimate	541,000	606,677
Marketability cost scenario	397,635	445,908
Monetisation cost scenario	275,910	309,405
Risk-adjusted strategic reference	136,177	152,709
Weighted economic reference	317,621	356,180

Cost basis

The recreation estimate comprises the retained expressly priced scope and the separately disclosed non-overlapping implementation budgets. Historical anchors and each successive scoped increment reconcile in the calculation below. Equivalent effort is a seller estimate; market value, actual expenditure and independent quotations are not established. Reuses the priced release foundation. Only implemented development software is included; independent network/field qualification and future release work are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source README and v3.7.0 release/evidence records report 74/74 software acceptance and historical Colab validation. Draft PR #17 describes 25 authored tests but has unclosed exact-head full-gate checks.

Remaining limits

No validated real-world network interventions, universally optimal repairs, full v3.10 acceptance, commercial security qualification or buyer-ready rights transfer.

Development position

v3.10 candidate: fail-closed leave-one-scenario-out decision stability

Acquisition evidence profile

Technical scope: V — A research platform for evaluating network disruption and recovery choices with traceable comparative outputs. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T1 — Implementation exists but core transfer evidence is incomplete. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-002 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
